

[COMPANY NAME]

Cloud-to-Cloud Backup for Office 365

Automated data protection and quick recovery

Safeguard your Office 365 environment with an automated backup solution that protects against corruption and unintended deletion of emails and files in Exchange Online and OneDrive for Business.

Barracuda Essentials for Office 365 gives you a backup-and-recovery solution that enables cloud agility without the need to compromise on control or accountability.

Cloud-to-Cloud Backup Features

Key Solution Advantages

For all of its benefits, Microsoft Office 365 provides basic backup capability, with limited data retention and no automated scheduling. Cloud-to-cloud backup from Barracuda Essentials for Office 365 brings layered protection to Office 365 environments through:

- Fully customizable scheduling and retention of emails and files
- Flexible data recovery and downloading to different sources
- Mobile applications for administration from nearly anywhere
- One solution for protecting Exchange Online emails and OneDrive for Business files

Mitigate User Deletion Risk

The No. 1 cause of data loss in a Software-as-a-Service (SaaS) deployment such as Microsoft Office 365 is accidental deletion.* In fact, about 70 percent of all lost data is due to either accidental or malicious deletion of data by end-users. While Office 365 is architected to ensure continuous service availability, the measures taken to prevent permanent data loss are limited.

Take Control of Office 365 Data

With Barracuda Essentials for Office 365, you can eliminate the risk of items lost due to accidental deletion. You can also retain emails and files indefinitely in case employees leave the organization unexpectedly, all without having to purchase additional licenses. Moreover, you can delete inactive user accounts to free up Office 365 user licenses quickly and easily.

Quick and Easy Restoration

- Easy search and retrieval of all backup data from the Barracuda cloud
- Point-in-time recovery of mailbox, folder, file, and email message data
- Flexible restoration to original or different user accounts

Reporting and Statistics

- Detailed reporting and audit logging
- Backup status and health monitoring for each backup source
- Automated email alerts detail items added, modified, or removed since the last backup

Administration and Policy Management

- Centralized management
- Mobile administration for Apple iOS and Android devices with the Barracuda Cloud Control Mobile App
- Role-based administration of users, privileges, and control access

Secure and Compliant Cloud Backup

- 128-bit SSL encryption for data in transit; 256-bit AES encryption for data at rest
- SSAE 16 Type II certification
- Redundant storage within and across geographically distributed data centers
